GITHUBH

WHAT IS GITHUB?

GitHub is a web where developers can store and collaborate on programming projects using proffesional tools that GitHub brings. To simplify, its like a notebook where you can make you progaming proyects and share them to you friends or teachers

HISTORY OF GITHUB

Github was developed by Chris Wanstrath, P. J. Hyett, Tom Preston-Werner and Scott Chacon

The software that runs GitHub was written in Ruby on Rails.

2008

Microsoft is committed to keeping GitHub an open and neutral platform for the developer community.

In 2018, Microsoft acquired GitHub for $7.5 billion.

How GitHub works

1.   Repositories
2.   Version Control with Git
3.   Collaboration
4.   Workflows
5.   Community and Open Source
